ABSTRACT

This report provides a profile of Miami-Dade Community College (MDCC) enrollment for the end of fall term 1984. The first section summarizes general enrollment trends over time by campus and by selected demographic variables. The next sections provide a summary of the ethnic composition of the students at MDCC, a description of MDCC students by age categories, and an analysis of trends for new and continuing students. The following section presents a 3-year comparison of Comparative Guidance and Placement (CGP) test score results by campus, by ethnic category, and by national quartile. Report hightlights include the following: (1) compared with fall 1983, there were 12,458 fewer credits generated and 553 fewer students enrolled in the fall 1984 term, reflecting a decrease in credit load and an increase in the number and proportion of part-time students; (2) the absolute number of Hispanic students declined in 1984, reversing a 20-year growth trend; (3) CGP test scores improved in fall 1984, with only 43% of the students scoring below the computation placement score compared to 48% the previous year; (4) the number of students in the 14 to 20 year-old age category declined, while the number of students in the 21 to 25 year-old age category and the mean age of students increased; (5) the average student credit load increased from 10.12 in fall 1983 to 10.21 in fall 1984; and (6) the proportion of students declaring the associate of arts degree (56.6%) as their objective remained stable. FALL PROFILE

1984-85 Closing Fall Enrollment Analysis

Abstract

The purpose of this report is to provide a profile of Miami-Dade enrollment for the end of Fall Term 1984. Comparative data from previous terms are also presented to illuminate any trends or patterns occurring over time. The report is divided into five sections, each of which focuses on major areas of interest. General enrollment trends are summarized first, followed by a focus on ethnicity of students, age and gender analyses, a profile of new and continuing students, and finally, an examination of test scores for new students this past Fall Term.

Among the highlights noted in this report are the following:

(1) There were 12,458 fewer credits and 553 fewer students this Fall Term. These data highlight the fact that credit load decreased once again, and the number and proportion of part-time students increased (to 65.2%). Credit load for new freshmen, however, increased slightly.

(2) The absolute number of Hispanic students declined this Fall, reversing a growth trend of twenty years. This general decline was reflected in the number of Hispanic new freshmen students also.

(3) There were fewer new freshmen this Fall (8,024) than for any year since 1969.

(4) For the first time since 1980, the number of continuing students has declined. This may indicate a turning point in the backlog of students fulfilling added graduation requirements.

(5) Comparative Guidance and Placement Test scores have improved this Fall term. The number of students scoring below the placement score on Computation was 43% this Fall compared to 48% last Fall. A slight but similar improvement was also evident on the Reading test.

GENERAL ENROLLMENT TRENDS

Miami-Dade has experienced an enrollment decline over the past five years. This section summarizes data over that time span, by campus and by selected demographic variables. The details of each table are left for the reader to examine. General highlights are as follows:

- Semester credits decreased again this Fall Term (Table 1). Most of the decline can be accounted for by almost 11,000 fewer semester credits generated on the North Campus. Wolfson Campus, on the other hand, appears to be stabilizing and has shown a slight increase in semester credits across the past three years. Campus trends are easily seen in Figure 1, where an increase in credits is also apparent for the South Campus.
- All three campuses showed an increase in non-credit activity illustrated by Table 2 and Figure 2. The net result collegewide was an increase of more than 4,000 semester credit equivalents this Fall compared to last Fall. Not surprisingly, non-credit headcount also increased this Fall (Table 3).
- Student headcount declined this Fall Term (553 fewer students), but not as severely as did credits generated (12,458 fewer credits). Figure 3 illustrates the difference between the enrollment decline pattern and the credit decline pattern at the College. Table 4 illustrates the net result of this pattern, a decline in average credit load across the past four Fall Terms. This decline is illustrated more dramatically in Figure 4.
- As might be expected from the above data, the absolute number of students classified as part time has increased for this Fall Term (Table 10). Part-time students now represent 65.2% of Miami-Dade's Fall Term enrollment. This gradual shift to more part-time enrollment is illustrated in Figure 5.
- In summary, both enrollment and credits generated have declined again this Fall Term, with credits generated showing a greater decline than enrollment. Credit load has decreased, and almost two-thirds of students enrolling during the Fall Term could be classified as part time (registered for fewer than 12 credits).

TRENDS IN ETHNIC ENROLLMENT

This section provides the reader with a summary of the ethnic composition at Miami-Dade. General findings from this section include:

- The absolute number of Hispanics at the College has declined this Fall Term, reversing a growth trend of the last twenty years. Additionally, both the number and proportion of black non-Hispanic students increased, which may reflect the results of recruiting efforts. Enrollment of white non-Hispanics continues to decline (Table 15).
- The collegewide decrease in average credit load is evident for each of the major ethnic categories. South and Wolfson Campuses black non-Hispanics, and Wolfson Campus white non-Hispanics depart from this trend and show an increased credit load for the Fall Term of 1984 (Tables 17, 18).
- The increase in black student enrollment is primarily accounted for by an increased number of female, part-time students (Table 20), attending the Medical Center Campus (Table 24). Medical Center Campus has the highest proportion of part-time students (72.2%) followed by Wolfson (66.8%), South (64.8%), and North (63.5%).
- The number and proportion of Hispanic and white non-Hispanic new freshmen declined for the Fall Term of 1984. For Hispanic students, this decline in new freshmen may mark a turning point in Hispanic enrollment.
- In summary, both white non-Hispanic and Hispanic enrollments declined this Fall, while black non-Hispanic enrollment increased. This marks the first time that Hispanic enrollment has shown a decrease.

TRENDS IN STUDENT AGE

This section provides the reader with a description of Miami-Dade students by age categories. Highlights of the data include:

- Another decline in the 14-20 year old age group is evident for the Fall Term of 1984 (Table 31). As was true last Fall, however, the number of students in 21-25 year old age group has increased. As a result, the mean age of students collegewide has increased this Fall Term.
- As might be expected, part-time students tend to be older (mean age equal to 27.27) than full-time students (mean age equal to 22.13). Female students attending part-time have the highest mean age at the College (28.22 years).

TRENDS FOR NEW AND CONTINUING STUDENTS

This section presents data by enrollment code, and allows an analysis of trends in new student and continuing student enrollment. Major trends appearing in the data include:

- The number of new freshmen has declined again (Table 36). There were fewer new freshmen this Fall (8,024) than any year since 1969.
- While the new freshman decline began in 1981, the number of continuing students has been increasing since 1980. For the first time this Fall Term, however, the absolute number of continuing students has declined. This may indicate a turning point in the backlog of students fulfilling added graduation requirements.
- While there has been a decline in new freshmen this Fall Term, their average credit load has increased from 10.12 to 10.21 (Table 36). Credit load for continuing students has declined once again this Fall Term, which is another way of saying that a larger proportion of continuing students are attending on a part-time basis.
- The proportion of students declaring the Associate in Arts degree (56.6%) has remained fairly stable this Fall Term. There has been an increase in the number and proportion of students in a non-degree personal interest status (Table 41). This increase appears to be spread fairly evenly across the campuses (Tables 42-45).
- As expected, Medical Center Campus has the highest proportion of students declaring an Associate in Science degree (62.7%) followed by the North Campus (29.4%), Wolfson Campus (21.4%), and South Campus (13.2%). Conversely, South Campus has the highest proportion of students declaring the Associate in Arts degree and Medical Center Campus has the lowest.
- The proportion of U. S. citizens in Miami-Dade enrollment has remained stable at 64.8% (Table 46). Wolfson has the lowest proportion of U. S. citizens (47.9%) while Medical Center Campus has the highest (76.9%).

BEST COPY AVAILABLE

While the College has attracted a lower of proportion of 14-20 year olds, the number and proportion of new freshmen (J students) in this age category has increased (Table 51). This has been accompanied by a decrease in the number and proportion of new freshmen in the 26-30 year old age group. Continuing students, on the other hand, show an opposite trend with a decrease in number and proportion in the 14-20 year age group compared to last Fall.

Residency data in Table 56 remain fairly stable, except for an increase in the number and proportion of out-of-state students (from 924 in 1983 to 1,292 in 1984). This increase is evident across all four campuses. The majority of students at Miami-Dade are Dade County residents (87.2%).

COMPARATIVE GUIDANCE AND PLACEMENT TEST SCORE TRENDS

Tables 61 through 63 present a three-year comparison of comparative guidance and placement test score results by campus, by ethnic category, and by national quartile. This is intended to give the reader a brief summary of the performance of Miami-Dade students on the college placement tests.

- A considerable change has occurred in the percent of students scoring below the placement score on the Computation test this Fall (43% compared to 48% last Fall). This improvement has occurred at all campuses except for Medical Center. A slight but similar improvement can also be seen in the percent of students scoring below the placement score on the Reading test. In this case the improvement is accounted for almost entirely by North Campus students.
- The test score improvement on Computation is apparent for all three major ethnic categories (Table 62), as is the improvement on the Reading test. Black non-Hispanic students continue to have the largest number of students falling below the placement score on each of the three tests.
- Some slight changes are apparent in comparison of Miami-Dade scores with national normative data (Table 63). Miami-Dade students outperformed the norming group for the Computation test, and have done so for the past three Fall Terms. The score improvement noted above on the Computation test is evident at all quartile ranges. Results for the Reading test and Written English Expression test remain relatively unchanged from last Fall.
